

PRESTIGIOUS TECHNOLOGIES PVT. LTD.

Company Presentation

Our Story

Incorporated in Jan-2017, Prestigious Technologies Pvt. Ltd. is a professional organization focused on serving the market with advance technology Equipment and Products. The technology offerings are from well renowned Global Manufacturers having Distinctive value proposition.

Prestigious Technologies Pvt. Ltd. primarily offers the following Solutions:

- Electrical Equipment - Power Conditioners, UPS Systems, HT/LT Transformers, Industrial Luminaires, SVG & AHF
- Ergonomic Solutions for Manufacturing
- Vibration Isolation Solutions

Vision and Mission

VISION

To be the preferred Technological partner to our Customers and seek growth through new ideas, new products and strong partnerships.

MISSION

- To Provide latest technologies to our Customer and ensuring prompt and efficient sales and aftersales services.
- Continuously strive for technology upgradation having unique value propositions to maximize customer benefit.
- Ensuring fair working environment based on respect and cooperation and continuously improving our business processes.

Our Products and Services

ELECTRICAL EQUIPMENT

STATIC POWER CONDITIONERS
UPS SYSTEMS
HT & LT TRANSFORMERS
INDUSTRIAL LUMINAIRES
STATIC VAR GENERATOR
ACTIVE HARMONIC FILTERS

STATIC POWER
CONDITIONER

ELECTRICAL EQUIPMENT

Static Power Conditioners

Common Power Quality Problems That Damage Your Machinery

ELECTRICAL EQUIPMENT

Static Power Conditioners

Why 20 Milliseconds?

Because Modern Machines Demand Precision Voltage Supply as per the Information Technology Industry Council (ITIC) Curve

ELECTRICAL EQUIPMENT

Static Power Conditioners

TSi's Secret For Powering Modern Electronic Machines

Time slot available to correct all voltage disturbances and convert bad power into precision power, conforming to ITIC Curve for Electronics.

PWM Static Voltage Regulation
technology corrects all Disrupted Voltages & Bad Quality Power and supplies 'Pure Power' leading to no downtime in the production line.

TSi-VRP During Sag Event

Input Sag

Output of Servo Stabilizer during and after Sag

Output of TSi-VRP during and after Sag

ELECTRICAL EQUIPMENT - HT/LT Transformers and AVR

Distribution Transformer
with OLTC

Global's Customers:

- Tata Motors Ltd.
- Nissan Motors
- JBM Group
- Coca Cola Ltd.
- Samsung India
- Britannia Industries
- Moser Baer India
- Reliance Industries
- Carrier Aircon
- Pepsi Ltd.
- Escorts Ltd.
- Indo Autotech Ltd.
- Sietz Technologies (Escorts Group)
- Hamdard Group
- Supreme Industries
- Neelkamal Plastic Ltd.

Distribution Transformer with
Inbuilt HT AVR (Automatic Voltage
Regulator)

ELECTRICAL EQUIPMENT – INDUSTRIAL LUMINAIRE

High Efficiency General Flood Lights

- High Efficiency General Flood Lights from Becmann Are Available from 50 Watts to 200 Watts
- Efficiency of 120 Lm/W
- Over Voltage Protection, 10 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection
- Integrated Mounting Arm
- Class 1 Fixture

BIS
APPROVED

ADDITIONAL
SURGE
PROTECTION

IP66

WIDE
BEAM

CLASS 1
FIXTURE

High Performance Bay Lights (UFO) For Industrial Application

- High Performance Bay Lights from Becmann Are Available from 75 Watts to 250 Watts
- Efficiency of upto 151 Lm/W
- Over Voltage Protection, upto 20 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection, EMI/EMC Protection
- Integrated Mounting Arm, I Bolt, Safety Wire and optional Antiglare Dome
- Class 1 Fixture
- Multiple Beam Angles available from 30 Degrees / 60 Degrees / 90 Degrees and 120 Degrees

BIS
APPROVED

ADDITIONAL
SURGE
PROTECTION

BECMANN

ELECTRICAL EQUIPMENT – INDUSTRIAL LUMINAIRE

High Performance Flood Lights For High Mast Application

- High Performance Flood Lights from Becmann Are Available from 150 Watts to 400 Watts
- Efficiency of 151 Lm/W
- Over Voltage Protection, 10 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection
- Integrated Mounting Arm
- Class 1 Fixture
- Multiple Beam Angles available from 20 Degrees / 45 Degrees / 60 Degrees / 90 Degrees and 120 Degrees

High Performance Bay Lights (Linear) For Industrial Application

- High Performance Bay Lights from Becmann Are Available from 75 Watts to 250 Watts
- Efficiency of upto 165 Lm/W
- Over Voltage Protection, upto 20 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection, EMI/EMC Protection
- Integrated Mounting Arm, 1 Bolt, Safety Wire and optional Antiglare Dome
- Class 1 Fixture
- Multiple Beam Angles available from 15 Degrees / 30 Degrees / 60 Degrees / 90 Degrees and 120 Degrees / Double Asymmetric

BECMANN

ELECTRICAL EQUIPMENT – INDUSTRIAL LUMINAIRE

High Performance Luminaires For Road and Highway Illumination

- High Performance Street Lights from Becmann Are Available from 45 Watts to 250 Watts
- Efficiency of 151 Lm/W
- Over Voltage Protection, 10 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection
- Class 1 Fixture
- Multiple Beam Angles available from IESNA T2 / T3 / T4 and 120 Degrees

High Performance Industrial Linear Bay Lights

- High Performance Industrial Low Bay Lights from Becmann Are Available from 36 Watts to 75 Watts
- Efficiency of 120 Lm/W
- Over Voltage Protection, 5 kV Surge Protection, Output Short Circuit Protection, Double Phase Protection
- Low Glare
- 120 Degree Wide Beam
- Designed to operate 24 hours X 365 Days

ELECTRICAL EQUIPMENT – Static VAR Generator

SVG is Virtually Maintenance free & Far Safer

- 100% solid state with latest generation IGBTs.
- Electronics free from contaminated air flow
- Long life cooling fans are simple to replace
- Capacitor free. No Need for constantly checking capacitors for degradation or failure
- Low risk – no swollen or leaking capacitors. Reduced fire risk.
- No contactors to replace
- Design service life of more than 100,000hrs, without maintenance. That's more than 10 years operation in a plant that operates 24/7. Capacitor based systems can last as little as three years.
- High power density means less precious switchboard room is use

ELECTRICAL EQUIPMENT – Static VAR Generator

Automatic Power Factor Correction (APFC)	Static VAR Generator (SVG)
<u>With Steps:</u> Employ switching IN and OUT fixed value capacitor banks and there by achieves the desired PF at the grid end of the supply	<u>Stepless:</u> Uses scalable IGBT based inverter to produce infinitely achieve the desired set point.
<u>Single Phase Sensing:</u> Normally APFC Relay works on R Phase Current Sensing & provide 3 Phase Equal compensation based on R Phase reactive Power requirement	<u>Three Phase Sensing:</u> SVG works on all three Phases (R ,Y & B) current Sensing & provide Individual compensation based on respective Phase reactive Power requirement
<u>LV Sensing:</u> Normally APFC senses the current on LV Side & reactive power of MV Transformer is not taken into consideration.	<u>MV /HVSensing:</u> SVG system senses the three phase current on MV/HV side & hence reactive power of transformer is taken into consideration
<u>Slow in Response:</u> Generally slow to respond and are an electro mechanical system and may take considerable time to achieve the desired result.	<u>Fast & Dynamic :</u> Takes 15msec to completely respond to the need and only 50ms to dynamically respond.
<u>Unidirectional :</u> Only corrects inductive load PF	<u>Bidirectional :</u> Correct both an inductive(lag) and capacitive (lead) load .
<u>Harmonic Resonance & Amplification :</u> with Capacitor Bank Resonance condition can occur & Capacitors (without detuned reactor) amplify Harmonics	<u>No Resonance & Amplification of Harmonics :</u> SVG can Operate Efficiently up to 12 % THDv.
<u>High Maintenance :</u> Require frequent switching of the stages to achieve correction for changing power factor and are subjected to frequent failures.	<u>Low Maintenance :</u> Needs little maintenance & Monitoring. The service life is expected to be greater than 11 years.
<u>Monitoring on Panel :</u> No monitoring possible due to lack of communication	<u>App Based Monitoring :</u> Dynamic monitoring using IoT with Wi-Fi connectivity (Optional)
<u>No Phase Balancing Option:</u> Not Possible to Balance Phases	<u>Phase Balancing Permissible :</u> Current in three phases can be balanced
